

Tank Coatings and Rehab

Polyurea is a high-performance sprayed waterproofing material that is ideal for water storage tanks. It can be used in place of a liner, mastic or welding tanks. It is also capable of patching holes in existing tanks.

Whether you are looking to rehab and extend the life of an existing tank or are looking to prevent corrosion and get the most life out of your new tank; our polyurea coatings provide an economical and long term solution for your needs.

Long Lasting

- Prevents Rust/Corrosion
- Abrasion Resistant
- 75+ yr. Life Expectancy
- Economical
- Quick Assembly

Cost Effective

- Eliminates Demolition and Replacement Costs
- Reinforces Existing Structure
- Safe and Less Invasive Install
- Minimal Downtime

Versatility

- Interior and Exterior Applications
- Potable Water Approved
- Storage of Chemicals & More
- +450% Elasticity

Call today for more information on Tank Coating and Rehabs, or water storage and rainwater harvesting needs!

Polyurea Spray Lining for Tanks

Polyurea is dual component polymer which is sprayed on a surface to be used as a coating which supports and strengthens the structure and provides a watertight seal. Expands 6000% on application.

Polyurea - The Answer For Tank Lining

- Polyurea is fast setting and allows almost immediate foot traffic.
- Down time is minimized, allowing a system to be back online quickly.
- Our Polyurea NSF-61 Potable Water and USDA approved.
- Can be used to store chemicals, oils and other materials as well.
- Chemical, abrasion and UV resistant.
- Ecologically friendly--low VOC (meets California VOC limits)
- Excellent for repairs--capable of seamlessly patching holes in aging tanks.
- Extremely flexible membrane (+450%)--capable of resisting failure in earthquake prone areas.
- Laboratory studies and the resulting extrapolations assume a lifespan of more than 75 years

Is polyurea coating waterproof?

Image result for polyurea coating for tank rehab

Polyurea can be used to waterproof both the joints and the surfaces of many concrete structures

How long does polyurea pool coating last?

In addition to mechanical and chemical resistance, elasticity and thermal stability, polyurea has a long service life of up to 25 years.

How long does polyurea take to cure?

Typically, a polyurea coating can be touched after a few hours and they will fully cured in about 24 hours
